

Data collection and validation of Governance parameters for a data driven leading ESG services firm

Objective

To collect and validate data on governance parameters of companies across geographies, available in the public domain

Our Work

Envint supported the Client by providing a time bound output for each company. The exercise involved

- Companies across geographies & sectors
- Template based response including raw data validated across multiple sources and annotated with comments
- Data handled across categories like Board structure & composition, independence, transparency, shareholder voting rights, compensation policies, related party transactions, controversy search, etc.
- Suggestions on improving the output template for efficacy & scalability in analysis of qualitative data

Impact

The output in the desired format with suggestions to improve the template was submitted within a crunched timeline. Proposal submitted for a much larger scope of engagement
